

How do you insert a You Tube video into SMART Notebook?

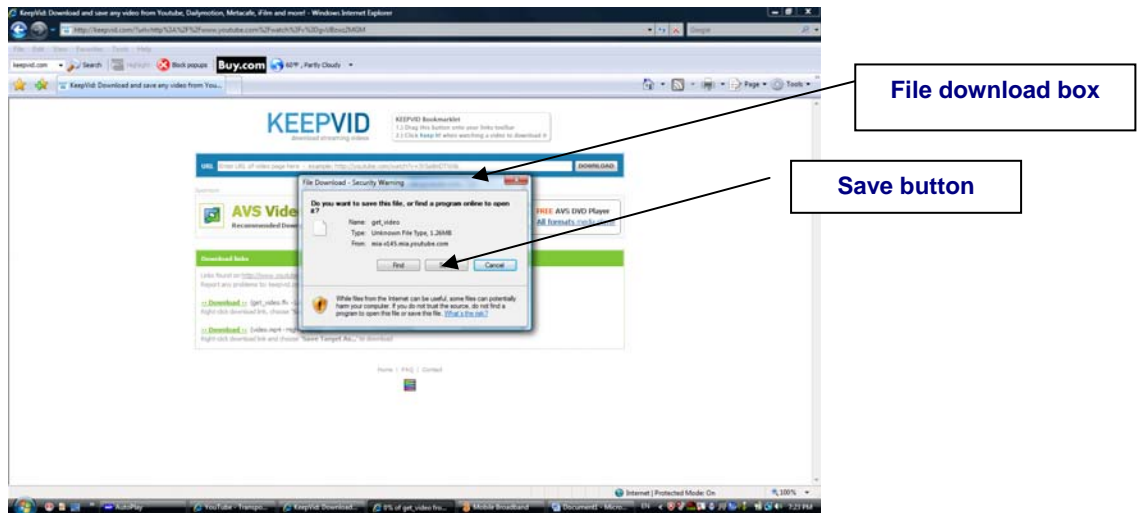

1. Use your internet search engine to find www.youtube.com
The screen below should appear. Search for the video you want.

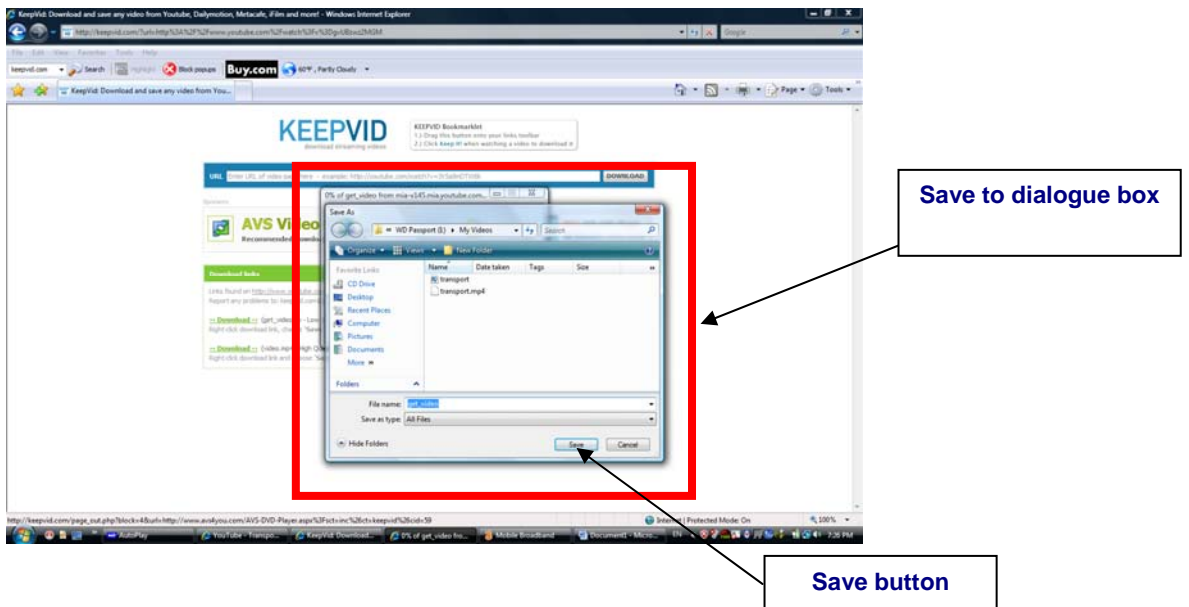

2. Use your internet search engine again to find www.keepvid.com . The screen below should appear.

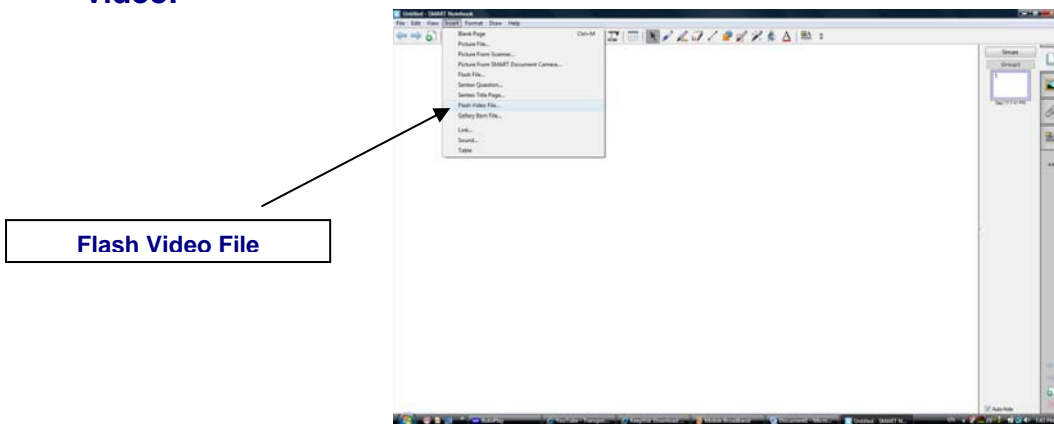

3. Download the .flv version to insert the video directly into SMART Notebook. The higher quality .mpeg4 version can be downloaded but it will become an attachment when you put it into SMART Notebook. The screen below should appear with a save dialogue box.

4. Save your video file to My Videos or your favourite spot and make sure you rename the file appropriately with .flv added to the end of the filename. (Instead of 'get_video')

5. Open SMART Notebook and go to 'Insert' on the top menu bar. Click 'Insert' and go down to Flash Video file. Navigate to where you have saved your downloaded video.

Your video is now inserted and can play. Congratulations!
